

QUAD and QUAD-UV 4 Color Multi-function Pocket Light with Strobe

WYLIE, TX, July 1, 2010 — Bayco, the leader in professional LED task lights introduces the NIGHTSTICK NSP-9404 and 9408 all LED multi-function pocket lights with strobe, designed specifically for public safety and military professionals.

“As our professional LED flashlight portfolio expands, a much wanted addition was a small multi-color / multi-function pocket light that can be used for lighting up the dark or illuminating things not immediately visible”, says Bijan Bayat, founder and CEO of Bayco. “The specs required white, red, blue, green and UV lights that run a long time and fit in a very small package. Our engineering team responded with the NSP- 9404 with white, red, blue and green and the NSP-9408 with white, red, blue and UV LEDs. They added a multi-position head, reversible metal pocket clip and a strobe feature for more versatility in the field. The black or tan colors easily blend into the users gear”

Each model has a sliding top switch for color selections and push buttons for power and strobe. The top switch and strobe button provide either constant-on or flashing mode for each color.

The NIGHTSTICK NSP-9404 has four high output LEDs; white (25 lumens) for all-around lighting, red (4 lumens) for enhanced night vision, blue (4 lumens) for finding blood or fluids and green (4 lumens) for high contrast viewing.

The NIGHTSTICK NSP-9408 has the same white, red & blue LEDs, plus a UV light (365 nm) for revealing security markers and other non-visible items.

Included are 3 premium alkaline batteries that can be easily replaced.

Typical usage includes: Law Enforcement, Security, Military, Pilots and Hunters
